FIRE

THEFT

CONFIDENTIALITY

**Secura Sweden AB** was founded in 1988, and since then it has been a leader in the development of fire-rated cabinets. Since 2007, all of our own manufacturing is located at our modern factory in Bollnäs, Sweden. Our manufacturing is split into two large product areas, fire-rated cabinets and cabinets for flammable products.

Our largest product in the area of fire-rated cabinets is, without doubt, our SA series, which you can find on pages 4–9. We have manufactured the SA series since 1991, even if it has been under continuous development to maintain its position as the clear choice when there is a need to protect somewhat larger quantities of documents against fire and theft.

In the area of cabinets for flammable materials, our series of fire resistant display cabinets, SGS, is the bestseller. The purpose of the fire-resistant display cabinets is to allow the maximum display of products every day when there is no fire and, at the same time, to protect staff, customers and buildings on the day fire breaks out. You can find our SGS series on pages 28–33. In this area, there are also cabinets for storage of LPG, laboratory cabinets and similar, which you can find on pages 34–37.

We hope you will find a solution that is suitable for your storage needs and you are always welcome to contact us.

# Protect documents during fire

- ❑ Modern design • lightweight
- ❑ Unique door design
- ❑ Durable powder coating

**SA 580**  
Holds 75 A4 binders  
**SEK 24,900**

**SA 990**  
Same as the SA 580 but with double depth.  
Holds 150 A4 binders  
**SEK 32,900**

SA Series – modern technology provides Sweden's most secure office!

As standard, the SA series comes equipped with a key lock in the handle. An even better protection against burglary is obtained by using a separate code lock or a security classed key lock.

Accessory code lock  
**SEK 3,300**

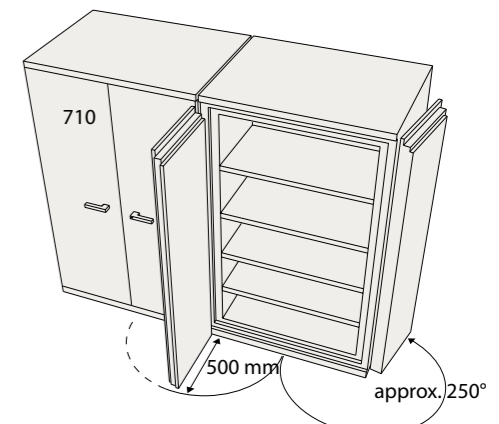

**SA 390**  
Holds 45 A4 binders  
**SEK 21,900**

## SA Series

Fireproof filing cabinets for large quantities of documents. Used in the work room to replace bookshelves or, alternatively, in the corridor or equivalent, as a common intermediate/local archive.

- Unique door design allows full access at 90° door opening.
- Lightweight, small external dimensions and practical doors make the cabinet easy to place close to the workplace.
- Durable powder coating in standard colour, RAL 9002. Other colours on request.
- The shelves shown in the picture are adjustable and are included in the standard delivery.
- Handle lock is standard. Electronic code lock or high-security key lock available for an additional charge.

## Think on! How do the storage needs appear?

In a large or medium sized workplace, it can be very important to review and study the procedures in place for fireproof storage. Where should the cabinets stand? Which members of staff will use the cabinets? Can you gather all the documents in the workplace in one place, or is it more practical to spread out the cabinets close to the appropriate user? If you want to save space, you can place the cabinets on compact trolleys.

Regardless of how you choose to place the cabinets, the SA series always offers a more flexible and secure solution than a fire-rated archive room. Read more about this on the next page.

The SA series can act as a local archive for each employee.

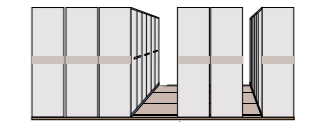

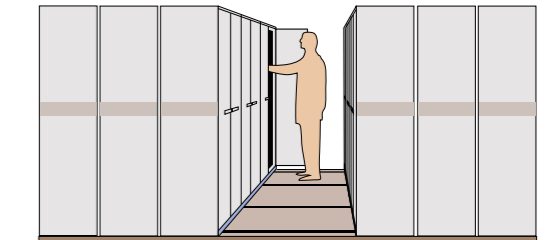

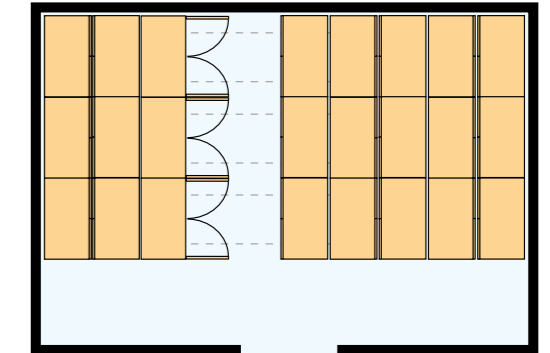

The cabinets can also be placed more centrally, e.g. to serve an entire department.

## Compact trolleys save space

Placing the cabinets on compact trolleys means a considerable space saving.

## How does a fire-related cabinet relate to the requirements for an archive room?

According to National Archives of Sweden's regulations, a fire-rated cabinet shall correspond to the protection requirements placed on a fire-rated archive room. Because the requirements for an archive room include that it must be built with construction elements with rating EI 120, many people believe that the cabinet must then have 120 P rating, which isn't correct. The test of a construction element and the test of a fire-rated cabinet, apart from the actual stated time, have very little in common.

A fire-rated archive room is a completed room structure where only individual construction elements are tested. In other words, no one has ever tried to place an archive room in a test furnace and then turned the heat up to 1000 degrees, as is done with a cabinet. Only individual construction elements have been tested and how they individually withstand heat from one direction. If a complete room was to be tested in a test furnace, it wouldn't withstand the heat for many minutes, which there are tests to show.

In order for a room to then protect documents in a fire, quite a lot of other requirements for measures, in addition to the basic structure consisting of floor, walls and roof to EI 120, have been added. You can read about this in the National Archives of Sweden's regulation, RAFS 2013-4, which describes in more detail the aspects that need to be taken into consideration, such as electricity, water, heating, ventilation etc. A very

important point is that it stipulates that the room must not be exposed to heat from more than one direction. In other words, measures must be taken to guarantee this, for example, by always placing the room in a corner of the building, reducing the fire load on some sides with the help of sprinklers and so on. This can be rather difficult when building a room in an existing property.

On the other hand, a fire-rated cabinet protects documents even when it is standing in the midst of fully developed fire. In terms of use, this means that the cabinet can be placed where the documents are used and handled every day, instead of where a room must be placed for building and structural reasons. Moreover, if several cabinets are used as an alternative to an archive room, a much greater level of protection is obtained with the cabinets. An archive room has just one protective barrier for all of the documents, which makes it very sensitive. Several cabinets mean, instead, several small separate fire cells, each of which protect a smaller proportion of the documents, thus providing a protective solution that is many times more secure and more flexible.

Because it is stipulated that cabinets shall correspond to the requirements set for archive rooms, we can, on the basis of the above reasoning, say that a fire-rated cabinet tested and approved to 60P, according to NT Fire 017, is more than equivalent to an archive room built according to EI20.

## SM Series

The cabinets are tested in accordance with Nordic norms and have fire-rating 60-120P in accordance with NT Fire 017.

As standard, they are equipped with electronic code locks, but they can also be ordered with key lock. You set your own code, which is easily changed when needed. Batteries are enclosed on delivery, and they are easily replaced from the outside of the cabinet.

There are no extra fittings for the SM series, instead, they are delivered as standard with shelves and lockable drawer.

## SV Series – our modern bestseller!

The SV series is a modern series of cabinets with high quality and finish. The cabinets are powder coated in RAL 9002. They are designed to protect suspension files against fire. The drawers are easily pulled out on ball bearing expanders. Each drawer is separately insulated and equipped with safety interlock.

To eliminate the risk of tipping over, only one drawer can be pulled out at a time. These cabinets come with central locking to lock one or more drawers at the same time. The cabinets are fire-rated according to NT Fire 017 to fire-rating 60P or 120P.

# Protect data media during fire

- Flexible storage of data media

## SC Series

Fire-rated data media cabinets with flexible fittings that are suitable for most needs. The highest fire-rating for data media, which means you can confidently store your important backups and know they will still be there, even if the business suffers a fire. As standard, the cabinets are delivered with high security lock with 2 matching keys and electronic code lock is available as an accessory. The lock design has direct locking, which means that the door locks automatically when it is closed. The fittings shown in each picture are included as standard.

When the stacks are to be placed freestanding, they are delivered with a 200 mm base.

# Theft resistant cabinets

- withstand simpler attacks

## SP Series

The SP series has no official rating but they easily withstand simpler attacks. If you want to be more secure, we recommend instead one of our S2 rated series S2 or S2 Fire, which provide a greater level of protection against burglary.

The SP series are theft resistant cabinets fitted with electronic code lock with 3-6 digit combination that can be easily changed as reset for private or hotel use. Comes with a mechanical lock for emergency opening.

### S2 Series

The Secura S2 series has class S2 according to EN 14450, which is a slightly simpler burglary-resistance rating that is suitable when you want to protect less valuable objects against theft. The S2 series also has a simpler fire insulation (not fire-rated). The S2 series is available with key lock (standard) or with the electronic lock accessory. Prepared for bolting in place on floor/wall.

The S2 series has a simpler fire insulation.

### SS Series

The cabinets are fitted with bolt lock and come as standard with resettable key lock. More keys or, alternatively, other locks such as, for example, electronic code locks, are available as accessories.

As standard, the fittings consist of adjustable shelves, there is a large range of other fittings available as accessories. For example, lockable compartments, deposit boxes, key fittings, suspension file frames etc.

Please note that the cabinets do not have any fire protection. If you want to protect against both fire and burglary, we recommend the SRE series instead.

## Secure storage of iPads, computers etc.

- Burglary-resistance rating according to SS 3492
- Compartments in different sizes
- Perfect for iPads and computers
- Separate lock on each compartment
- Master key

### SL Series

As standard, the security cabinet is locked with a resettable key lock with 2 matching keys. As standard, the compartments are fitted with key lock with 2 keys and the option for a master key system. Different versions of electronic code locks are available as accessory.

The lockable compartments can also be purchased separately as dedicated stack, if you want to use them in rooms or corridors (see page 16).

## Thin sheet metal suspension file cabinets

□ For storing suspension files

### SHX Series

The SHX series maintains high quality throughout and has the largest capacity of all current commercially available suspension file cabinets. The cabinets are delivered with robust expansion rails and anti-tipping drawers.

They are powder coated in RAL 9002 as standard (other colours for an additional charge). We can also cover the front of the drawers in different types of wood, such as beech, birch etc. Delivered as standard with 2 keys and central locking as well as labels for marking the handle strips.

### Display cabinets with shutter locking

The shutter cabinets do not have any burglary-resistance rating but they do provide a very high level of protection. The frame is 4 mm 100% welded steel sheet. The shutter is motorised and locks with security cylinders with 2 matching keys on the side of the cabinet.

### Accessory display shelf

A pull-out display shelf with 12 faces and pushers for cigarette packs. The shelves are easily fitted on to the shelf brackets that are fitted as standard in the ST 440 and ST 680.

## Protection for vending machines

- Optimum function daytime, maximum security at night
- Motorised security shutter

### ExpoSafe

Secura's ExpoSafe protection cabinets are developed to protect product vending machines, for example, against burglary. The protection does not infringe upon the vending machine's function and does not affect the use for customers or staff. During the day, the shutter is open to display the vending machines and their contents, while at night, it is closed and provides good protection against attack.

The cabinets can be supplied for 2 or 3 vending machines and are suitable for both Vensafe and Smartshop. If dimensions specific for the location are needed, we can also produce solutions for this end.

Please contact us for questions or a tender. We would be happy to shown an onsite installation, if you would like to see it "live".

	ExpoSafe V2		ExpoSafe V3

Shutter weight	approx. 65 kg		approx. 85 kg	
Colour	RAL 7044		RAL 7044	
Capacity	2x Vensafe / Smartshop		3x Vensafe / Smartshop	

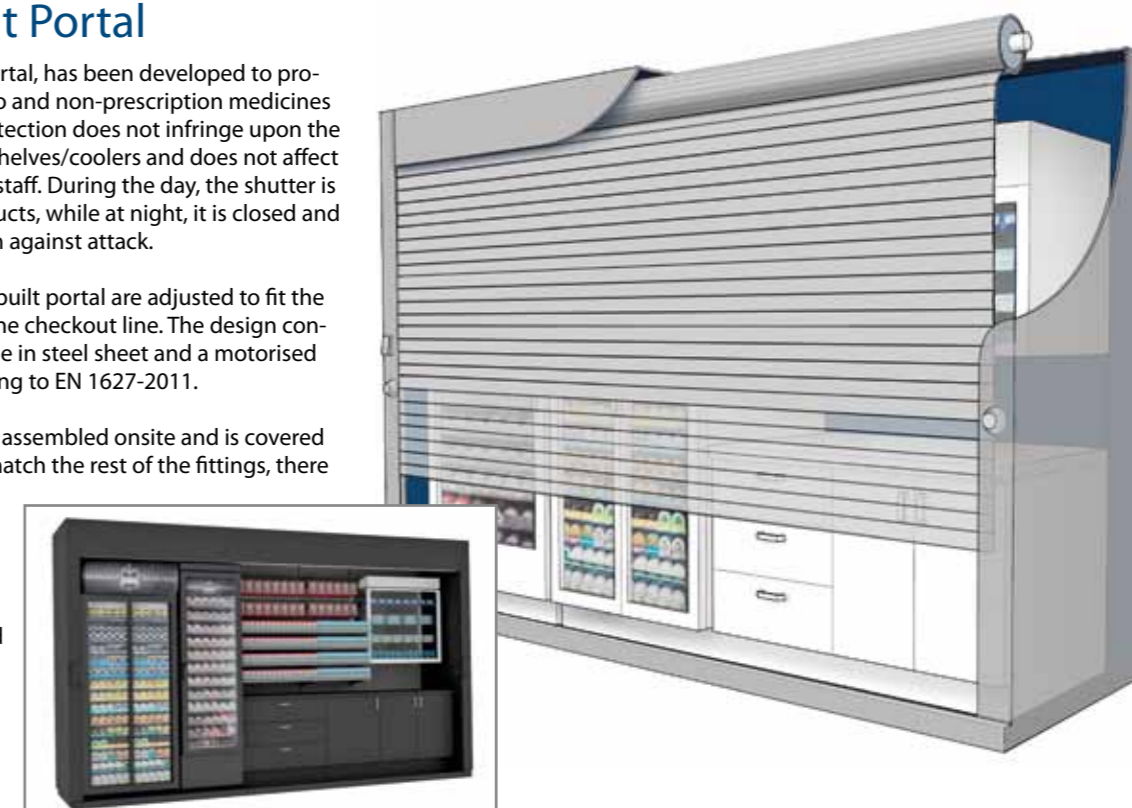

## SÄKER Inbuilt Portal

Secura's SÄKER Inbuilt Portal, has been developed to protect, for example, tobacco and non-prescription medicines against burglary. The protection does not infringe upon the function of the product shelves/coolers and does not affect the use for customers or staff. During the day, the shutter is open to display the products, while at night, it is closed and provides good protection against attack.

The dimensions of the inbuilt portal are adjusted to fit the shop's modules behind the checkout line. The design consists of a 4 mm thick frame in steel sheet and a motorised shutter in class 3, according to EN 1627-2011.

The protection cabinet is assembled onsite and is covered with wooden panels to match the rest of the fittings, there are a number of colours and patterns to choose from.

There are many areas where our easily adjusted inbuilt portal can be a good solution. Please contact us for questions or a tender.

# Safe storage of flammable products

- The best solution from a sales and safety perspective. Many good characteristics combined!

## Why do we need fire resistant cabinets?

Flammable liquids and aerosols ignite easily and burn violently! The cabinets task is to separate the liquids and aerosols from a fire long enough for both customers and staff to evacuate the premises calmly and collected and then for the fire brigade to arrive to put out the fire.

## What are the rules for storing flammable products?

The Swedish National Inspectorate of Explosives and Flammables regulation SÄIFS1996:2 "Handling of Flammable Products at the Point of Sale".

Flammable gases and liquids shall be handled in a manner that ensures reliable safety and the handling must not obstruct evacuation or rescue efforts. If more than 125 ml liquid (class 1, 2a, 2b) or gas (e.g. butane or propane powered aerosols) or, alternatively, more than 25 litres liquid in class 3, measures shall be taken to guarantee this.

E.g. store the products:

- in fire-resistant cabinet complying with SP 2369 class 1.
- 6 metres from combustible materials
- in fire-rated room (EI60-90)

### What is a flammable liquid?

Flammable liquids, at relatively low temperatures, can give off vapours that can ignite. It is always the vapour that burns, not the actual liquid from which it comes.

According to Swedish law, flammable liquids are liquids that have a flash point\* less than or equal to 100°C. They are divided into four classes – 1, 2a, 2b and 3 – where the two first classes give off sufficient quantities of vapour for ignition to occur at room temperature.

\*The flash point is the lowest temperature where the quantities of vapour given off from a liquid's surface are sufficient for the vapour plus air to start burning.

### Why are they flammable? How can they catch fire?

For something to burn, fuel, oxygen and an ignition source are required. The fuel is the vapours from the flammable liquid. The oxygen is in the air. The ignition source can be a flame, a spark or a hot surface.

If the mixture of vapours and air is right, it only requires a small spark, for example, a small static discharge or a spark that arises when objects bang together, for the vapour to ignite.

### A few examples of flammable liquids:

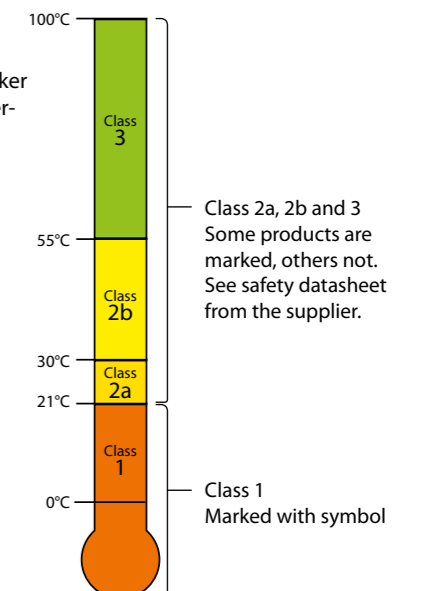

CLASS	LIQUID	USE
1	Petrol	Fuel for vehicles and various tools, cleaning
	Acetone	Solvent, nail varnish remover
	Ethanol, 2-propanol	The fuel, for example, for spirit stoves, decorative stoves, concentrated windscreen washer, carburettor spirit, methylated spirit, environmental friendly fire lighter, hand disinfectant
	Methanol	Denaturing agent in some ethanol products, fuel for hobby motors
	Toluene, ethyl acetate	Solvent, common main component in thinners
2a	Diethyl ether	Included in some fuels for hobby engines, stain removers
	Xylene	Solvent, for example, in adhesives, some quick drying paints, anti-corrosion paints
	Paraffin	Fuel for paraffin stoves, radiators, fridges
2b	Turpentine	Solvent
	Petroleum products	White spirit, brush cleaner, solvent in oil paints and oil varnishes, degreasers
3	Diesel	Fuel, fuel for electricity generation
	Fuel oil	Fuel for heating and electricity generation
	Petroleum products	Lighter fluid, lamp oil

### Common flammable aerosols

Jointing foam, spray paints, marker ink, radar spray, 556 spray, universal spray, lock spray, etc.

Marking Flammable products

# Fire resistant display cabinets, SGS series

Maximum display, customer friendly and fire safety

With Secura's fire resistant display cabinets, you give you product **optimal exposure**. The cabinet's LED lighting (accessory) provides a bright light that covers the entire display surface. Lighting is the most important accessory for promoting the display and sales of the products. The cabinets are available in any colour as an option.

# Fire resistant display cabinets, SGS series

Maximum display, customer friendly and fire safety

With Secura's fire resistant display cabinets, you give the product the optimum display. The LED lighting in the cabinet (an optional extra) gives off a strong light which covers the entire display area. The lighting is the most important option for promoting the display of, and selling, your goods. As an option, the cabinet is available in any colour.

## SGS 460

Each shelf holds 36 x 1-litre bottles. A total of 216 standing 1-litre bottles of 6 different heights

Standard fittings: 5 adjustable shelves.

Correct storage of flammable liquids and aerosols according to the requirements in SÄIFS 1996:2

**Classification:**  
SP 2369 Class 1

**Ext. dimensions mm**  
Height 1980

Depth 600

**Weight kg** 400

## Correct storage of gas and LPG

- ☐ Complies with the requirements for EI30 and EI 60 separate storage
- ☐ For placing indoors. Can be adapted for storage outdoors
- ☐ Optional placement of lead-throughs and ventilation.

SAG Series  
from SEK 15,900

The SAG 990 holds 2x P45 bottles

## SAG Series

According to MSB's regulation, SÄIFS 1998:7, EI30 requires separation for all storage of flammable gases on public premises. Examples of public premises include schools, hospitals and health centres, restaurants and so on. The SAG series reduces injuries in the event of a fire by separating the flammable gas from the actual fire. This allows time to evacuate the premises and carry out fire-fighting measures before the gas ignites and worsens the course of the fire. The SAG series protects people on the property and also reduces the damage caused by the fire.

## Safe storage of large volumes of flammable products, e.g. 200-litre drums of windscreen washer fluid

We use our SGS 990 as the base product and then fit it with the following:

- half-pallet support, to provide a stable base in the cabinet
- 1 adjustable shelf
- collection tray, which holds the same volume as the drum
- injector mixer
- lead-through as well as fire-proofing (pipe choke)

We have many options to adapt the products to suit your particular wishes. E.g. regarding the placement of lead-throughs, possible ventilation and suchlike.

By using this solution, we can offer you sealed and safe handling of flammable liquids, allowing you to improve your chances considerably of minimising harm and injuries in the event of a fire.

## Safe storage of flammable liquids

- ☐ Approved according to EN 14470-1 to fire-rating 30-90
- ☐ Self-closing doors
- ☐ Ventilated

### SGP Series

All of the cabinets are equipped with self-closing doors, which can be kept open during working hours. In the event of a fire (temperature increase of 50 degrees), the doors close automatically, preventing the liquids in the cabinet from igniting. The doors can also be locked when necessary. The cabinets are fitted as standard with supply and exhaust air connectors (100 mm) for ventilation as well as shelves and bottom tray. There are also various accessories, for example, carbon filter fan, which simplifies the placing of the cabinet as there is no need to run separate ventilation to the outside of the property.

Pull-out shelves in different alternatives are available as accessories. Contact us for more information.

## Safe storage of flammable liquids

- ☐ Ventilated metal cabinet with fire insulated walls
- ☐ Tested for external fire according to SP 2369 class 1

### SG Series

Suitable cabinet for storing flammable liquids and aerosols in laboratory environments, warehouses, industry etc.

The cabinets are tested by SP for external fires in accordance with test method 2369 class 1. The cabinets have also been subjected to ventilation tests for through-ventilation and to show that vapours from chemicals cannot leak out. The cabinets also comply with Möbelfakta's very strict requirements for surface durability.

The entire cabinet is made from strong steel sheet. Doors, sides, top and bottom have a sandwich structure with fire insulation in-between (Brandbatts 150 in accordance with NT FIRE 001 and ISO 1182:1990). The cabinets can also be fitted with an insulated back. This is appropriate when they will not be standing against a wall made from non-flammable materials.

The doors are recessed in the frame. The handle is provided with a breaking point. A stop is welded on to the inside of the doors on the hinge side. This is to make it difficult for anyone to break in by removing the hinges. The doors are fitted with a reinforcing profile that, when the doors are closed, touches the shelves. This is both to prevent the doors from being knocked inwards and to protect the espaniolett lock. The cabinet is fitted with a strong espaniolett lock, ASA cylinder lock with two keys as standard. The cabinet can be hung on the wall and it is then delivered without a base.

It is delivered as standard with adjustable shelves, which have upturned edges and sealed corners to stop liquids from running off if there is any leakage. The cabinets can also be fitted with a bottom tray, if you want to store large cans. Ventilation duct with longitudinal hole, allowing all of the shelves to be ventilated. Exhaust air connector on the top (100 mm).

## Fire-ratings and burglary-resistance ratings

### Fire-ratings

There are several different tests for fire-rated cabinets. We primarily use the Nordic test, NT Fire 017, which is also the most used test in Europe.

The test is carried out by placing an empty cabinet in a test oven that is heated up to approx. 1000 degrees. (See heating curve below). We mainly test the cabinets for 60 and 120 minutes, but 90 minutes is also used sometimes.

During the whole process, the temperatures inside the cabinet are measured to ensure they do not increase by more than 150 degrees for paper (P) or 50 degrees for data media (D or Dis). A cabinet that is tested for 60 minutes and keeps the temperature below +150 degrees is then given the fire-rating 60 P, and, if it should keep the temperature below +50 degrees, it is given the rating 60 D.

#### NT Fire 017

Even if this is a Nordic test, it is still one of the most used in Europe. Even producers from India, South Korea, China etc. often choose today to test cabinets according to this norm.

#### EN 15659

European standard that is very similar to our NT Fire 017. It also permits a simpler fire test for 30 minutes, which, according to NT Fire, is not a satisfactory fire-rating.

#### EN 1047-1

European standard including impact test and post-cooling test. Used less and less today because the test is unnecessarily difficult. Cabinets that are tested in accordance with this test become very heavy and robust, which does not match the needs of businesses today.

#### UL

American test that may correspond to our Nordic NT Fire, but which also contains several different subordinate tests. Because UL only stands for

Underwriters Laboratories, which performs the tests, there should be further clarification stating the test UL performed.

#### JIS and KSG 4500

Japanese and Korean test respectively. Not used today, because the majority have chosen to test according to NT Fire 017 instead.

#### Is fire-rating 60 P sufficient?

A fire-rated cabinet does not withstand 60 minutes fire, as many people believe, but rather, it will withstand so much more! A fire-rated cabinet is tested in a furnace, where the cabinet is surrounded by up to 900 degrees for 60 minutes. A fire can certainly burn for several hours, but it cannot maintain the same temperature in the one and same place for 60 minutes, unless it is supplied with new energy or if there are extreme conditions prevailing at the site. Normally, it may be as hot as 1000 degrees for a few minutes (5-10) in a room, because the combustion of the available energy is then very fast. The seat of the fire then moves on, allowing the temperature in the room where the cabinet is placed to fall.

A fire-rated cabinet tested and approved to 60 P according to NT Fire 017 (Nordic norm) therefore has a good margin when it comes to safely protecting your documents during a fire.

### Burglary-resistance rating

Burglary-resistance ratings exist in several different levels because burglary, in contrast to fire, which is more static, is more dependent on who the burglar is and the equipment used. We call the simplest cabinets, without rating, theft-resistant and they may be suitable for temporary storage of lesser valuables. Most producers today use 3 different European tests. These are EN 1143-1 for safety deposit boxes, EN 1143-2 for deposit boxes and EN 14550 for simpler burglary ratings. In Sweden, we still have our own tests for security cabinets/weapon cabinets SS3492, even though the European tests will be gradually phased in.

#### Anti-theft cabinets EN 14550

Exists in two different levels. S1, which is the simplest test, and S2, which is slightly stronger. The test is simpler than SS 3492 and mainly means that it should not be possible to break into the cabinet in 2-5 minutes using simple hand tools.

#### Security cabinet SS3492

Mainly a test for weapon cabinets, but also used for small amounts of cash (max SEK 30,000), theft-prone equipment and instruments, key and suchlike. The security cabinet does not provide any fire protection at all, only just protection against theft.

#### Safety deposit boxes according to EN 1143-1

(EN 1143-2 for deposit box)

Comes in several different levels, which we call grades, where grade 0 is the lowest and grade VII is the highest. The various grades are then linked to the amount of cash/valuables that may be stored in the box/cabinet. There may be some variations, but in general, insurance companies in Sweden approve the following amounts in boxes/cabinets without alarm (With alarm, the limits for the amounts increase).

Grade 0 = SEK 50,000  
Grade I = SEK 80,000  
Grade II = SEK 140,000  
Grade III = SEK 210,000  
Grade IV = SEK 350,000  
Grade V = SEK 550,000 and so on.

There are also several older classifications that are still approved, even if we long ago stopped testing cabinets according to them. E.g. LPS 1183, SS 3150, SS 3000 and so on.

## FREIGHT

#### Freight to address

Freight with Schenker from factory/warehouse to an address in Sweden. The delivery takes place to an address with road transport where the goods are unloaded at loading platform, goods reception or similar. Further transport is not included in the price. Normally, delivery takes 1-2 days from confirmed delivery time from factory/warehouse.

#### Inward delivery to designated location

The cabinets are delivered to a designated location, taken into the office/equivalent and put in place. Packaging, pallet etc. are removed and the cabinet checked for the correct function.

Additional charge for inward delivery to designated location, assumes the following:

That the delivery address is close to our partner's ordinary delivery area. This might mean that the tariffs may not apply for less well trafficked areas in Sweden.

The cost does not include lifting up or down from street level, but rather, presumes that the cabinet can be transported vertically on a trolley from the vehicle to the location.

Simple levelling takes place in connection with the delivery. If the floor is not straight, or moves afterwards, it is possible that the function of the cabinets will change, which is not included in the haulier's responsibility.

The cost does not include any deliveries at an arranged time but rather presumes that we can coordinate deliveries, for which reason, the delivery time may be 1-2 weeks in addition to the delivery time from the factory, which is given on the order confirmation. If delivery at a fixed time is wanted, we will be pleased to provide a tender for this.

### Prices freight and delivery to point of use

Cabinet weight, kg	< 30	< 95	< 145	< 245	< 300	< 350	< 450	< 550

Additional charge for delivery to point of use	-	SEK 1,400	SEK 1,500	SEK 1,700	SEK 1,900	SEK 2,000	SEK 2,200	SEK 2,500

## TERMS AND CONDITIONS

Period of validity: Applies up to and including 31 December 2017.

#### Terms of delivery

Free from place of manufacture, including packaging. Additional cost for Euro pallets.

Secura always recommends that our products be delivered by special transport that, apart from delivering the cabinets to the recipient's address, also takes the cabinets into a designated spot, unpacks the cabinets, levels them and adjust for the correct function.

Transport damage shall be reported immediately to the haulier.

#### Payment terms

Payment must reach us by 15 days from the invoice date, unless otherwise agreed when placing the order.  
Delivery time: Approx. 3 working weeks after ordering, unless otherwise agreed.

#### Prices

All prices are given in SEK. Applicable Value Added Tax applies.

#### Warranty terms and conditions

1-year factory guarantee on all cabinets, unless otherwise agreed.

#### Lock warranties

The warranty on electronic locks only applies for replacement of parts, Secura does not pay for the cost of replacement, or availability of the parts. See the relevant lock supplier's warranty terms and conditions.

#### Order confirmation

Despatched from Secura approx. 2-4 days after ordering.

#### Invoices

Despatched to the buyer on the same day the products are delivered from the factory.

#### Other

Secura maintains the right to change the range, design and prices without advance notification thereof.
